Summary

Final-year Computer Science and Business Systems undergraduate with hands-on experience in Backend Development and Data Structures & Algorithms in Java. Skilled in designing scalable web applications using MERN Stack, RESTful APIs, authentication & databases. Experienced in developing real-time applications with WebRTC & Socket.IO, integrating third-party APIs & deploying applications using Docker & cloud platforms. Passionate about writing reliable, scalable software & continuously strengthening software engineering & problem-solving skills.

Education

Netaji Subhash Engineering College, Kolkata

B.Tech Computer Science and Business Systems

CGPA: 7.27 / 10

August 2023 – Jun 2027

Raiganj Coronation High School (HS), Raiganj

Marks: 474 / 500 = 94.8%

Class 12th (WBCHSE)

January 2021 – Feb 2022

Raiganj Coronation High School (HS), Raiganj

Marks: 652 / 700 = 93.14%

Class 10th (WBBSE)

January 2019 – Feb 2020

Skills

Programming Languages: Java, Python, JavaScript, TypeScript, C, SQL

Frontend Development: HTML, CSS, ReactJS, ReduxJS, NextJS, Bootstrap, Tailwind CSS

Backend Development: NodeJS, ExpressJS, EJS, MongoDB, MySQL, PostgreSQL

DevOps Technologies: AWS, Docker, Kubernetes, Github Actions

Tools & Platforms: VSCode, Git, GitHub, Hoppscotch, Postman

Projects

Tradely: An Online Stock Trading Platform [GitHub](#) [Live Demo](#)

- **Tech Stack:** ReactJS, NodeJS, ExpressJS, MongoDB, Mongoose, Tailwind CSS, Socket.IO, JWT, Razorpay, Chart.js, Docker, GitHub Actions
- Built an online stock trading platform with a real-time trading terminal, portfolio analytics & watchlists.
- Implemented Limit, Stop-Market, Stop-Limit, Trailing Stop, OCO orders with server-authoritative price execution.
- Developed real-time market simulation using Socket.IO, with dynamic holdings & realized/unrealized P&L analytics.
- Implemented JWT authentication with HTTP-only cookies & production security using Helmet, CORS & rate limiting.
- Integrated Razorpay payment gateway with secure HMAC SHA-256 verification & webhook processing.
- Containerized backend & frontend services with multi-stage Docker builds & automated GitHub Actions CI.

Connekt: A Real-Time Video Conferencing Platform [GitHub](#) [Live Demo](#)

- **Tech Stack:** ReactJS, NodeJS, ExpressJS, MongoDB, Mongoose, Tailwind CSS, Socket.IO, WebRTC, JWT, Zod, Axios, Docker, GitHub Actions
- Built a real-time video conferencing platform with authenticated meetings, in-meeting chat, screen sharing & history.
- Implemented modern WebRTC peer-to-peer communication, ICE candidate buffering & seamless screen sharing.
- Developed authenticated Socket.IO signaling with JWT verification & server-side chat validation with rate limiting.
- Implemented JWT authentication with HTTP-only cookies & production security using Helmet, CORS & rate limiting.

Havenly: A Travel & Accommodation Booking Platform [GitHub](#) [Live Demo](#)

- **Tech Stack:** NodeJS, ExpressJS, MongoDB, Mongoose, EJS, Bootstrap, Passport.js, Cloudinary, Razorpay, Mapbox GL JS, Nodemailer, PDFKit
- Built a travel & accommodation booking platform with integrated MongoDB database for managing listings & reviews.
- Implemented user authentication, authorization, async error handling & RESTful MVC architecture.
- Added cloudinary image uploads, form validation, smart property search experience & interactive Mapbox maps.
- Integrated Razorpay payment gateway with secure HMAC signature verification & server-side price calculation.
- Implemented secure booking management, cancellation, downloadable PDF invoices & booking confirmation emails.
